

Java programmer required immediately for PC/MAC/I-Phone project

August 14, 2009

Local manufacturer of Professional Audio and Video equipment is looking for a contract programmer to write a Java-based program operating on both PCs and Macs to control the Company's video switching equipment. The task requires the ability to create visual user interfaces for windows based PCs, Apple, and I-Pod based devices.

Application description:

The User interfaces will utilize graphical Icons and images to control a remotely connected device. The output of the graphical user interface will be serial string based messages via COM ports and TCP/IP connections. The GUI will continuously synchronize its state with the current state of the remote device.

Requirements:

The Windows and Apple application software is to be written in Java and an I-Pod application will be written for the I-Pod SDK. Preferably, the same programmer will possess skills to write both programs. Icon images, bit maps and serial string syntax will be provided by Intelix.

Project time frame: immediately, continuing on and off for three weeks.

Pay: Contractor relationship at \$30 per hour maximum budget \$1000
