If a problem can be solved with digital technology, we can solve it, and you can be part of that solution right here in Plainfield and Chicago, Illinois.

At Digital Forces we dare you to think big! We don’t lock our developers in a closet or see code as your only contribution. We like to work hard, get out in the field, and experience our creations in person. We like to know how comfortable you are at learning new things, prioritizing tasks, estimating difficulty, helping others, and presenting your ideas in writing or in person. We pride ourselves on continuous learning and promote internal development. When our people grow, we grow.

Recent and Current Work:
- New Polk Bros. Fountain at Navy Pier
- Software and hardware to help manage the construction of two airport terminals at New Orleans
- Software and hardware to help manage and display train and bus information in the new multi-model station in Massachusetts
- Hardware and software to provide ADA voice to the new CTA bus stops in the Chicago loop

Future Work:
- Augmented Reality
- Collaborative Logistics
- Machine Learning

To Apply:
Write us at hr@digitalforces.com Tell us how and why you first got interested in your field, and what keeps you interested. Tell us areas where you’re an expert – technologies, tools, languages, operating systems, problem domains and skills. Include your resume and GPA.

Application deadline is September 30, 2017

Signing bonus after 60 day paid probationary period.

Digital Forces is an Equal Opportunity Employer –Advanced Age, Race, Color, Religion, Gender Identity, Sexual Orientation, Disability, National Origin or any status criterion that applies to Veterans.
Full-Time Software Developer

Description

Digital Forces is looking for software developers with experience in software design, coding and debugging. You will start working as a Web Developer (.Net) and App Developer (Android/iPhone) with future growth opportunities in augmented reality and artificial intelligence.

Roles and Responsibilities

- Develop applications (coding, programming)
- Documentation and testing new software applications
- Assessment of new application ideas
- Research competitor offerings
- Assist in interviewing beta testers

Personal Qualities

- Results oriented with a strong customer and business focus
- Highly innovative, flexible and self-directed, but also a cooperative team player
- Ability to communicate and discuss technical topics with both technical and business audiences
- Ability to adapt to new technologies and learn quickly
- Able to thrive in a challenging and dynamic environment
- Strong sense of ownership and passion for creating clean, elegant and flexible solutions to the functionality challenge

Basic Qualifications

- Excellent analytical and math skills
- Working knowledge of software development tools and methodologies
- Working knowledge of programming languages - C++, C, C#, ASP/VBScript, JavaScript or Visual Basic
- Majors: Computer Science/Network Engineering, Engineering, or Mathematics

Preferred Qualifications

- 2+ years experience in software development
- 3+ years experience of design, implementation, systems architecture, infrastructure architecture, database architecture and networking
- Experience with software/technology in a customer-facing role (pre-sales, sales, consulting, etc.)
- HTML, CSS, JavaScript, AJAX, SQL, C, C#, C++, Web services and great GUI (both for design and for usability)
- Presentation skills with a high degree of comfort speaking with internal and external executives, IT Management, and technical teams
- Excellent communication skills with an ability to right level conversations
