Developer

Are you passionate about programming? Are you looking for an opportunity to continue learning and be part of dynamic team? We’re looking for a developer to be the next member of our growing team! The work we do is varied and challenging, so you will need the tenacity to take on our increasing list of development projects that benefit students, faculty and staff at UW-Madison and beyond. You’ll have an opportunity to learn while you work as part of a team to help customers to design, build, and deploy custom applications. Responsibilities range from design to development and implementation of services taking advantage of centralized applications and integration tools (WS, REST, SOAP) when building these applications. Typical duties include:

- Analysis of requirements and high-level functional design of systems
- Independently develop technical designs
- Perform complex programming activities
- Directing and coordinating efforts of other professional staff
- Provides technical expertise to direct the development of new systems
- Maintenance and support of operational systems.

Who are we looking for? A developer who is eager to continue learning and growing their craft professionally. You’ll need exceptional communication and customer service skill since you’ll be working alongside clients, project managers, and other developers. We are looking for someone who is passionate about custom application development, thrives on teamwork, and is comfortable working with a range of languages (e.g., Java, Javascript, PHP, and/or related dialects). They would have knowledge of modern techniques in object oriented programming as well as experience with modern frameworks, libraries, tool sets, and development practices (continuous integration, version control, etc). The emphasis will be on collaborating with teammates to deliver and maintain high quality, efficient, and robust applications. They would also possess strong design skills where solutions will likely include cross platform integration using vendor packages, web services, custom applications and database design.

Must have: You’ll be a software developer looking for a new challenge. Well-qualified candidates will have strong development and problem solving skills and an exceptional ability to communicate highly technical concepts to any audience. Our required characteristics include:

- Strong customer service skills and orientation
- Excellent problem solving and communication skills
- Strong and active interest in a team development approach
- Demonstrated desire to learn new things
- Experience with version control systems
- Experience developing with PHP, Java, Groovy, or other JVM languages

Bonus points for:

- Flexibility in development frameworks, languages, and other tools
- Experience with Agile methodologies
- Experience with developing web services
- Experience with Spring Framework
- Experience with Laravel Framework
- Experience with AngularJS Framework

Enjoy a competitive salary, robust benefits: University Benefits Package, career growth opportunities and work/life balance in a great Campus Setting.
