Are you passionate about IT and looking for an exciting, international career in a leading Technology firm?

Do you have what it takes to succeed?

Prove it!

Dynatrace’s Professional Development Program (PDP) seeks highly motivated and energetic final year students or recent graduates in the Computer Science or Information Systems fields. Is that you? If so, this elite, intensive and immersive program will turn you into a highly-skilled, precision-trained professional on the fast track to success. The program is formulated to produce our Guardian Delivery Consultants for Dynatrace.

As a Guardian Consultant with Dynatrace, you will become a personal superhero to our customer.

Dynatrace Guardians are skilled professionals trained to monitor applications from the end user to the data center. They support operations staff by providing critical application performance, availability and capacity data. They also help review performance trends and service desk tickets to aid in proactive monitoring efforts. Dynatrace trained APM Guardians help our clients obtain the maximum value from existing investments, while allowing their IT staff to focus on core capabilities and activities.

**Typical Activities**

- Ensure our customer’s business critical applications are available and performing at their peak.
- Summarize and review performance trends with customers.
- Be the Dynatrace subject matter expert for the client staff. Assist them with troubleshooting and root causing performance issues.
- Maintain and enhance dashboards and reports to meet requirements of IT and business users.
- On-board additional applications for monitoring and update software with any necessary service packs.

To ensure new Guardian Consultants are sufficiently equipped for success, we provide a structured Professional Development Program (PDP). The four month training program is a mix of technical and business instruction taught by our very own, industry leading Dynatrace experts.

Interested? Ask yourself, is this you?
