Hours: 40/wk Full-time

Both Undergraduate & Graduate Majors

Company Website: www.forcepoint.com

Job Description

Would you like to be part of a dynamic team that delivers innovative, leading-edge firewall security solutions to some of the most important organizations in the world?

We are looking for bright, passionate engineers to help us test our firewalls and ensure they meet our customers’ expectations, while learning about the world of industry-grade software and cyber security. If you’re a recent graduate with a strong affinity towards software quality, and keen interest in getting your software used around the world, we’d like to hear from you.

Essential Functions

- Develops and executes the test strategy (plans, cases, etc.) for assigned features.
- Logs defects into issues database and tracks them through closure.
- Configures workstations, operating environments and networks as needed to complete assigned testing.
- Reports test results and maintains schedules for assigned features and functionality.
- Participates in test automation.
- Performs other duties as needed or required.
- Receives general guidance and assignments from a project or QA lead.
- In the first few months of employment works with an appointed mentor to ensure rapid learning of products, tools and processes.

Skills and Qualifications

- B.S. in Computer Science (or related field) or equivalent experience.
- Knowledge of Linux and/or FreeBSD.
- Familiarity with testing methodologies and the defect reporting process.
- Demonstrates the ability to analyze a problem and complete detailed reports.
- Able to methodically produce the steps which exhibit bugs in the product and to reproduce and communicate these steps.
- Demonstrated ability to work efficiently with minimal supervision.
- Demonstrated ability to work productively as part of a larger team.
- Excellent communication skills – fluent in written and verbal English.
- Ability to periodically work off hours or more than 8 hours in a single day as needed.
- Ability to appropriately deal with confidential information and/or issues using discretion and judgement.
Preferred Skills

While the skills below are not mandatory for applicants for this role, having one or more of these will be highly advantageous.

- Knowledge of C/C++, Java, Ruby and/or Python.
- Experience with TCP/IP networking protocols.
- Experience with automated testing tool.
- Experience writing effective automated tests.

This might be a position for you if...

- When you encounter incorrectly functioning software you investigate until you state exactly what is working incorrectly and recreate it.
- You manually assign the IP addresses on your home network.
- You have ever optimized your systems to reduce latency, for a better gaming experience.
- You found a faster DNS server than what your ISP provides.
- You want to start your journey in the security industry, but just need the opportunity to get your foot in the door and prove yourself.
