The Information Retrieval and Machine Learning group at Oracle Labs is looking for highly motivated interns for both Spring and Summer 2015. The candidate should be proficient in Machine Learning and/or Statistical NLP. Our current focus is in the areas of search, information extraction, including entity extraction and linking, relationship extraction, sentiment analysis as well as topic models. Other focus areas include parallel and distributed inference algorithms, deep learning and word embeddings, graphical models and transfer learning.

Research experience in any of these areas is strongly preferred. The candidate should also have good implementation skills in Java, Scala or other common language of choice.

We are located in Burlington, MA, and the candidate would need to relocate to this area. We are open to both Masters and PhD candidates, but PhD candidates are preferred. Please send your CV to pallika.kanani@oracle.com for applications or questions about the position. Oracle is an equal opportunity employer.
