Title: Software Engineer Internship - New York

Position Type: Internship

Location: New York City

Compensation: Paid internship

Description:

We need world-class engineers to develop our information exploration technologies. The problem space includes everything from exploring huge information sets to presenting complex information in an easily digestible form for end-users.

We are looking for talented and passionate software engineers who love to code and aren’t intimidated by challenging problems. We brew modern web tools and know the open-source world inside out. We are designing algorithms to solve novel search problems across heterogeneous information. Our information exploration technology allows analysts to understand complex relationships.

Requirements

- Pursuing a BS/MS/PhD in Computer Science or equivalent
- Java experience a big plus
- Enthusiasm for solving interesting problems and a willingness to take on new product features
- Interest in working on a rapidly changing, ever-evolving system
- Software engineering internships are available on multiple teams

Degrees:

Computer Science
