

**Propeller Health**  
**634 W Main St, Ste 102**  
**Madison, WI 53703**  
**Propellerhealth.com**

Propeller Health is a technology company committed to improving the management of chronic respiratory diseases like asthma and COPD. We are a small team, in the beautiful city of Madison, Wisconsin, that enjoys working together to create and apply technology to challenging problems that have enormous social costs. Our business is growing quickly and we're expanding our team. We'd love to have you join us.

**Propeller Health is seeking new grads, soon-to-be grads, and grad students for the following positions:**

**iOS Engineer (full-time)**

This is your opportunity to make an impact solving big, important problems that have a direct impact on peoples' lives. Your primary responsibility will be to build beautiful user interfaces that delight customers and improve the health of millions of people suffering from respiratory diseases. We are seeking someone with a B.S. in Computer Science or equivalent with 3 years of professional engineer experience, expert knowledge of Objective-C and iOS frameworks, and experience developing, releasing, and supporting iOS frameworks.

**RQA Engineer (full-time)**

A bright, intelligent individual with integrity is needed for an exciting role in Quality Assurance and Regulatory Affairs in a high-energy environment with rapid development cycles. In this position, you will have the opportunity to incorporate your ideas that will not only impact product quality before testing begins but also during traditional testing activities that are part of device design in a regulated environment. We are looking for an inquisitive, quality-minded person to assist us in the development of some of the newest technologies being incorporated into medical devices today including cloud-based web application software, mobile software applications and wireless sensors. Bachelors degree in the sciences preferred, but not required.

**Web API Developer (full-time)**

This is your opportunity to make an impact solving big, important problems in a small but vocal team. Your primary responsibility will be designing, building and consuming RESTful web services for our disease management platform. We have a modern, but very deep, coding stack. The back-end services run on Node.js and Mongo. The client applications include native iOS and Android applications as well as multiple browser interfaces. The most successful developers will wear multiple hats as needs arise. This will include mobile and back-end development, as well as customer support. In your primary role, your responsibilities include implementing JSON-based web services implementing data analytics and finding answers inside a vast amount of data, researching and experimenting with third-party data sources, working in a collaborative development environment, and implement and follow development processes that comply with medical regulations while enabling the team to work efficiently.
