Remedy Analytics is looking for undergrads and graduates to fill a limited amount of both full time and internship positions.

We are a healthcare technology company headquartered in Milwaukee working with clients that represent the largest and most sophisticated purchasers of prescription benefits in the country. Clients such as CBS Broadcasting, Citibank and Honeywell depend on Remedy to keep expanding our technology capabilities utilizing raw claims data to drive actionable decisions to provide better more cost effective health outcomes for their employees.

**In short, we are looking for model-building, quantitative analysis masters:**

- Someone that has proven themselves to others that you can take a mess of potentially ambiguous tabular data and create high quality and defendable statistical and machine learning-based analysis.
- You don't dismiss small mismatches between numbers. That would really irk you until you understand and resolve the discrepancy.
- Someone who is well beyond basic SELECT statements and trivial JOINs.
- You have demonstrated experience in working with complex data structures.
- You have solid experience with at least one general-purpose programming language.
- You are savvy with at least one numerical/statistical software package.
- You are hungry to learn, have a solid track record growing skills in a fast-paced environment, and have built mastery over complex data sets in previous situations.
- Someone who likes performing analyses and building mathematical models to answer questions about our data.

As a company, we believe in getting people to work on what they enjoy and are good at (which is usually the same thing), so the above responsibilities will expand and change, based on our needs and your capabilities and interests. **Therefore, your title will be up to you to determine.**

The positions are open immediately for the right candidates and we will continue our search until we find the right people.
