Appointment: Academic Staff fixed term appointment - Project

Position Announcement:

The University of Wisconsin-Extension, division of Continuing Education, Outreach and E-Learning (CEOEL) is currently seeking an IT Network Engineer to provide advanced technical services, consultation, administration, support and maintenance of the network. He/she will oversee all aspects of the data center operations including software, hardware, power, HVAC (environmental conditions) and network connectivity. The IT Network Engineer is responsible for supporting an infrastructure that facilitates a mobile workforce utilizing desktops, laptops, mobile devices, and software licensing. This position will work with a variety of software technologies in the following platforms: Windows Server environment, VMware, IIS, MS Exchange Server, and SQL.

Responsibilities:

• Designs, specifies, configures, installs, and maintains local area network hardware, software, and telecommunications services.
• Develops architecture of new server environments, storage and data management, applications, and security solutions/vulnerability remediation for all Web Services infrastructure.
• Develops and implements policies and procedures related to network hardware and software acquisition, use, support, storage, security, backup and recovery.
• Responds to and resolve alerts from server monitoring systems to ensure Web Services application availability.
• Establishes and maintains network users, user environment, directories, and security.
• Develops and communicates standards for use, operations, and security of network, personal computers, and data.
• Negotiates contracts with and coordinates activities of hardware, software, telecommunications, support, and training vendors.
• Collects, analyzes, reports on and manages network performance, capacity, traffic and memory utilization.

Minimum Qualifications:
• Bachelor’s Degree or an equivalent combination of education and experience is required.
Two years related experience administering or supporting network infrastructure.
Excellent written and verbal communication skills.
Direct experience supporting Windows 7/8 OS including desktops, laptops, and mobile devices.
Experience with one or more of the following technologies:
  o Windows Server OS
  o Active Directory
  o Group Policy
  o VMware

Preferred Qualifications:
- Bachelor’s Degree in Computer Science, Information Technology or other related field.
- Five years related experience administering or supporting network infrastructure.
- Knowledge of Server Technologies such as SAN, SQL and IIS.
- Knowledge of Network Technologies such as wireless, routers and switches.
- Knowledge of Desktop Management tools including SCCM/LANDesk or other Imaging, application packaging/deployments methodologies.

Ensure consideration:
Applications will be accepted and reviewed until the position is filled. For best consideration, please apply by Sunday, December 6, 2015.

Application procedure:

A complete application will include the following:
1. A letter of interest addressing the applicant qualifications and experience as they relate to the responsibilities of the position.
2. A professional resume.
3. Names, email, addresses, and telephone numbers of three professional references including at least one current or past supervisor.
