Software Developer

Extreme Engineering Solutions seeks a motivated software developer to help maintain and enhance existing applications for internal use. If you are looking to contribute to the efficiency and effectiveness of real-world apps that make a difference within a growing company, we look forward to discussing this opportunity to join our talented team.

Duties and Responsibilities:
Responsible for the creation and maintenance of in-house applications and tools related to the company's engineering, manufacturing and business processes. Primary work will involve supporting existing applications by programming within legacy code and designing web-based tools using JavaScript/jQuery. Specific responsibilities include the following:

• Troubleshoot and debug existing applications for continual improvement.
• Add features and enhancements to in-house tools to support changing processes and business needs.
• Consult with stakeholders in various departments to gather user requirements and develop a plan for development upgrades.
• Collaborate with others on the application development team to create next-generation software solutions to business needs.

Qualifications:
• Entry-level and experienced programmers are encouraged to apply.
• Computer Science, Software Engineering or Computer Engineering degree preferred.
• High level of comfort with Linux command line.
• Knowledge of object-oriented design principles and common design patterns with some experience with PHP or a similar language.
• Able to work effectively both within a team environment and as an individual contributor.
• Project management capabilities and prior experience working with end users is a plus.

Compensation and benefits:
Extreme Engineering Solutions offers a competitive salary and excellent benefits, including group health and dental insurance, 401k and paid vacation.
