The Parks laboratory is seeking one or two students to assist in computational projects relating to analysis and visualization of complex biological datasets. Specific projects include lab server/database implementation, developing computational pipelines for analysis of biological data and working on large datasets using computational cluster. Work will involve SQL, python, and R. Preference will be given to applicants with relevant experience. Experience in bioinformatics methods would be helpful, but is not required.

Undergraduates or graduate students are welcome to apply

Pay: $10-12/hour depending on qualifications; work hours are 10-15 hours per week.

If interested, contact Brian Parks, PhD at brian.w.parks@wisc.edu
