FULL TIME – Big Data Engineer

Remedy Analytics is a Milwaukee-based healthcare technology company dedicated to reducing pharmaceutical spending. Our proprietary technology and analytics empowers Fortune 100 companies in media, television, government, financial services, manufacturing, and more with actionable analytics and intelligence to save millions of dollars annually.

Remedy’s team of pharmacists, doctors, engineers and industry experts are dedicated to creating new methods for ensuring cost-effective health outcomes. You will have the opportunity to work side-by-side with our 15-person team across product, marketing, client engagement, and engineering.

We believe in hiring the best and brightest that are driven, take initiative and want to change the world. We are an experienced team of doers. We thrive on problem solving, creative thinking, innovative solutions and relentlessly disrupting the status quo. We want team members who are eager to take on responsibilities above and beyond the ordinary. You will have the opportunity to make a real impact within a start-up company and gain outstanding experience that will benefit you for a lifetime. You will participate in every aspect from problem solving to design to coding, testing, delivery and model development.

The ideal candidate will have the following:
- You’re a doer, a problem solver, obsessed with detail and out-of-the-box thinking challenging the status quo.
- You thrive on autonomy, and you can translate ideas into action to drive innovation.
- You’re an amazing team player that is self-aware, self-guided and eagerly seeks out the next hardest challenge.
- You’re hungry to learn and can demonstrate a solid track record of growing skills in a fast-paced environment.
- You can communicate effectively with business managers and product stakeholders.
- You have hands on experience with Hadoop HDFS, Hive, Pig, Impala, Spark, Oracle, MS SQL, MySQL or have constructed data models.
- You’re a relationship database expert, have worked with data at scale, understand warehousing and data loading and have experience in a Linux environment.
- You have an understanding of machine learning and analytics stacks, and can make objective decisions about technologies.
- You can write high quality, reliable and maintainable code.
- Healthcare, biotech and/or life sciences industry experience (or a passion for it) is a plus.
- You have a BA/BS, MA and/or PhD in a relevant field.
